# Oasis E System updates and workflow modifications – Sandata Point of Care (SPoC)

Dear Valued Customer,

The Oasis E assessment has been deployed in both SPoC and SAM and will be created when a MOO90 date of 1/1/2023 or later is used. The document has been updated with CMS guidance on each OASIS question and includes the item intent, rationale, specific instructions, and coding instructions. This information will provide needed support and self-service education as your team is learning and gaining experience using this assessment. In addition, you will find that we have enhanced the assessment tool to include skip patterns which will be very helpful to your clinicians.

It is important to note that in SPoC the document version is driven by the "Date Assessment Completed" field on the Quick Start Menu not the Visit Date. If you do not see the "Date Assessment Completed" field, please contact us at spocsupport@sandata.com. See screen shot below.

As our team continues to ensure all integration items regarding the Oasis data set are working as expected we would like to outline your steps.

Steps:
1. Continue to utilize the Skinny Oasis to create your NOA for SOC episodes and export it to your MAC within 5 calendar days to avoid financial penalties on your final claim.
2. Enter the full OASIS E data into SPoC for all Oasis types
3. Validate and scrub the data
4. Send it to the office and complete the Oasis
   a. Note: You will see that the Oasis will decline in the integration log. Our team is actively working to resolve this. Once resolved you will be able to filter the integration log for assessments that declined, mass select, and export them. We will provide directions with screen shots along with notification as soon as the fix has been deployed.

As a result of the very large changes to this version of the OASIS assessment it will be important for your team to use the next couple weeks to become familiar with the changes and take the time needed to scrub the Oasis. You will want to work your clinicians to understand the new guidance and make needed corrections to each assessment.

In addition to the tools in the system you may access the CMS OASIS E User's Manual here: **https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HomeHealthQualityInits/HHQIOASISUserManual**

We will send out additional communications once the resolution to the integration is available. At that time we will include directions with screen shots on how to mass select and re-export your Oasis assessments to SAM.

If you have any questions about this communication or need assistance, please contact Customer Care at spocsupport@sandata.com.
